

TokenIdle

tokenidle.com

V.2.0

Resume

TokenIdle's mission is to create an accessible learning space where everyone can learn the fundamental concepts of blockchain and understand its potential. Users will be rewarded with TokenIdle \$TKI for each skill acquired during their learning journey.

Our long-term vision is that mastery of blockchain and its economic and social implications can open career opportunities for users and create new jobs. To achieve this, we plan to create a platform that meets the needs of two types of users:

- Beginner users who want to discover the basics of blockchain.
- Experienced users who want to deepen their knowledge and discover the latest industry trends.

The TokenIdle platform uses NFTs (Non-Fungible Tokens) to validate the skills acquired by users. These NFTs can then be used to earn interest (staking) in TokenIdle \$TKI tokens and to be traded on a dedicated marketplace.

Users can achieve their goals by accumulating the most TokenIdle, collecting unique NFTs, and receiving other exclusive rewards. The platform has its own player economy, where users can truly own, buy, sell, and trade the tokens and NFTs earned through their skills and contribution to the ecosystem.

TokenIdle is not just a platform for blockchain users, but a platform that could introduce blockchain to millions of people.

Warning

The contents of this white paper are subject to change and should not be considered a guarantee or promise from TokenIdle or any other person or organization mentioned in this white paper regarding the future availability of services related to token use, their performance, or their future value.

It is important to note that there are risks associated with the development of the TokenIdle platform and the underlying technology. There is no guarantee that the platform creation process will be uninterrupted or error-free and there is an inherent risk that the game contains weaknesses or vulnerabilities that may result in, among other things, the loss of tokens.

This white paper does not constitute a buy recommendation or financial advice, but only information. Any investment in TokenIdle carries significant risks, such as price volatility, insufficient liquidity, and potential total loss of capital. It is important to understand the risks before any investment.

Introduction

TokenIdle is a platform that allows users to earn rewards for acquiring blockchain and Web 3.0 technology skills. It operates using the Polygon blockchain and the TokenIdle \$TKI token is the platform's utility token.

Our goal is to reward users for their engagement by offering TokenIdle \$TKI tokens in exchange for their actions on the platform. We aim to revolutionize traditional learning methods by giving users true ownership of their skills through non-fungible tokens and rewarding their participation in the ecosystem with our utility token, \$TKI.

There will be and already are many NFTs that users can collect, each offering different reward capabilities. NFTs increase the production of TokenIdle \$TKI tokens based on the user's performance.

The \$TKI Token

TokenIdle is the native currency of the game, it is an ERC-20 token that is used to purchase NFTs on the marketplace, participate in the game, and trade on decentralized exchanges such as Uniswap. It is based on the Polygon/Matic blockchain technology, a sidechain that runs parallel to Ethereum, allowing for fast transactions and reduced transaction fees.

There is a limited supply of TokenIdle tokens that can be used for various purposes such as:

- Marketplace: NFTs can be bought with TokenIdle tokens on the marketplace.
- TokenIdle Game: NFT holders can be rewarded with TokenIdle tokens on the gaming platform.
- Decentralized Exchange: TokenIdle tokens can be bought and sold on decentralized exchanges.
- Staking: It will be possible to lock TokenIdle tokens to generate passive income.
- Education: Users will have access to blog articles and newsletters to improve their skills.
- Major Blockchain: There will be a competition that will reward the best profiles in the ecosystem.
- These uses allow users to participate in the TokenIdle ecosystem and reap economic and educational benefits.

The TokenIdle platform

TokenIdle Ecosystem for Users

The TokenIdle Game platform: Users can learn about blockchain and cryptocurrency concepts while being rewarded with TokenIdle tokens for their engagement and progression in the game levels.

The TokenIdle marketplace: Users can exchange TokenIdle tokens for unique and high-value NFTs, which can be used to earn additional token interests (staking). The NFTs can also be used to access exclusive content and special events.

In conclusion, the TokenIdle ecosystem offers an interactive and enriching gaming experience that allows users to earn real money value while learning about blockchain and Web3.0 technology.

NFT Ecosystem

The TokenIdle platform allows users to earn TKI rewards for their engagement and progression in learning about blockchain and Web3.0 technology. To do this, players must acquire NFTs, which are unique non-fungible tokens that represent skills or achievements in the game.

Some NFTs can be purchased on the platform's marketplace using TKI tokens, while others can only be obtained by validating specific skills. These NFTs provide access to additional rewards, such as token interests (staking) in TKI, increased TKI token production, and exclusive benefits in the game.

NFT Characteristics

The NFTs that can be purchased on the marketplace give you access to exclusive benefits such as interest on your \$TKI tokens when you stake them, discounts on future purchases, or privileged access to exclusive events.

On the other hand, skill NFTs reward learning and mastery of concepts related to blockchain and Web 3.0 technology. Each validated skill NFT grants you a reward in \$TKI tokens and also allows you to progress in the game levels and access increasingly challenging challenges.

NFT Issuance

At TokenIdle, we believe that non-fungible tokens (NFTs) are a key tool in helping users monetize their learning and engagement in the ecosystem. That's why we decided to create a platform where NFTs are issued solely by TokenIdle. These NFTs can be obtained either by purchasing them on the TokenIdle marketplace or by validating specific skills.

Whatever the means of obtaining, these NFTs are entitled to rewards in TokenIdle \$TKI tokens. It is important to note that these NFTs will be available at all prices, so that all users can benefit. The power of the rewards will directly depend on the price and/or difficulty of obtaining a given NFT.

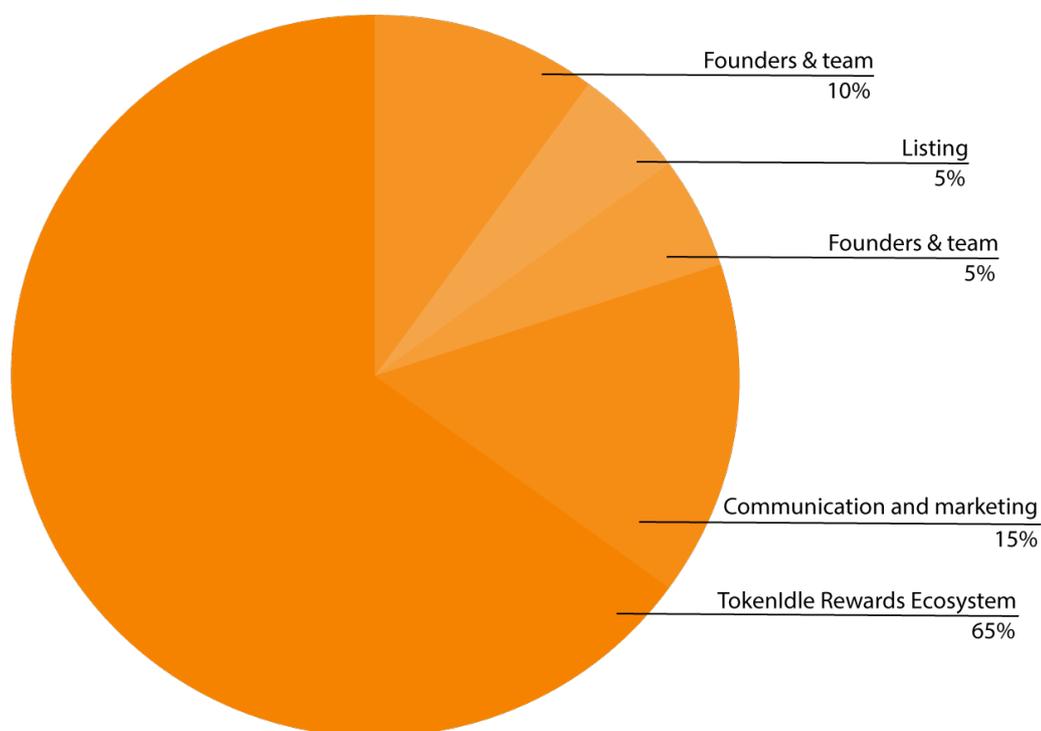

Tokenomics

The TokenIdle platform is based on the use of non-fungible tokens (NFTs) that allow users to validate their skills and receive rewards in TokenIdle token (\$TKI). NFTs are unique and limited in number, they can be purchased on the marketplace or earned by taking actions on the platform.

Our goal is to create an ecosystem that rewards users for their engagement and participation in platform growth. We want to offer NFTs accessible to all players, regardless of their budget, by issuing NFTs at different prices and with different reward levels.

By using this player-based economy, we hope to build innovative business models that will bring immediate liquidity to users and investors.

TokenIdle Distribution Plan

Type of allowance	Number of TKI tokens
Private sale	100 000 000
Listing	50 000 000
Founders and team	50 000 000
Communication and marketing	150 000 000
TokenIdle Rewards Ecosystem	650 000 000
Total	1 000 000 000

TokenIdle has allocated a portion of its token reserve for specific uses. Private sale tokens are reserved for exclusive sale, listing tokens for public sale upon listing on a decentralized exchange, founder and team tokens for TokenIdle's founding members, communication and marketing tokens to support promotion and communication initiatives, and finally TokenIdle rewards ecosystem tokens to reward players on the TokenIdleGame platform. This ensures effective use of tokens for different platform development needs.

Investing

The sale of tokens reserved for TokenIdle's founders and team is subject to restrictions to ensure the platform's long-term stability and growth. Each team member can only sell 5% of their tokens every quarter, and only if the TokenIdle price is higher than the previous quarter. This ensures that the team is aligned with the interests of the platform and users while maintaining sufficient liquidity to fund development and marketing initiatives.

Deflationary mechanism (burn)

We have implemented a strategy to regulate the TokenIdle supply. During each sale of our NFTs for our TKI token, a portion of the funds will be used to reduce the circulating supply by burning tokens. This will help maintain the token value at a stable level. Furthermore, a portion of these funds will be used to reward players and support the game's future development, while others will be used to support the different technologies related to the platform.

Roadmap

It's important to note that the priorities outlined in our whitepaper are subject to change based on factors such as rapid user growth, groundbreaking discoveries, and community feedback. It's also important to understand that these projections are based on the best knowledge and expertise of our team, but can be affected by unforeseen factors. TokenIdle is an innovative platform that uses cutting-edge and constantly evolving technologies, which carry significant risks and uncertainties.

- ~~T1 2022 : Concept and idea of TokenIdle~~
- ~~T2 2022 : Creation of the TokenIdle~~
- ~~T3 2022 : Creation of the marketplace, closing of the private sale~~
- ~~T4 2022 : Referencing on a decentralized exchanger~~
- ~~T1 2023 : (\$TKI) Start stacking~~
- T2 2023 : Launch of the NFTs which validate technical skills
- T3 2023 : Rewards on NFTs + Blog launch + newsletter
- T4 2023 : Blockchain Major

Summary

In summary, the TokenIdle platform is designed to reward users for their time, effort, and purchases dedicated to the game and ecosystem growth. NFTs play a key role in this ecosystem by allowing users to earn interest on the TokenIdle token. NFTs can be purchased on the marketplace and have different characteristics, with different prices. The more valuable the NFT is, the more it increases the interest in TokenIdle. The deflationary mechanism of the token is also in place to reduce the number of tokens in circulation and create a sense of scarcity, which will increase the value of the token.
